

Supplemental figure 1
Wingender et al.

Supplemental figure 1. Phenotype and function of intestinal iNKT cells:
(A) Representative expression of NK1.1 on iNKT cells derived from the spleen (tinted, in both panels), IEL (dashed) or LPL (black line) from the small or large intestine of C57BL/6 mice. (B and C) Frequency of CD103⁺CD4⁻ iNKT cells in indicated organs, depicted as summary graph (B), summarizing two independent experiments with 3 - 5 mice per group, or as representative data (C).
